

# Change Happens

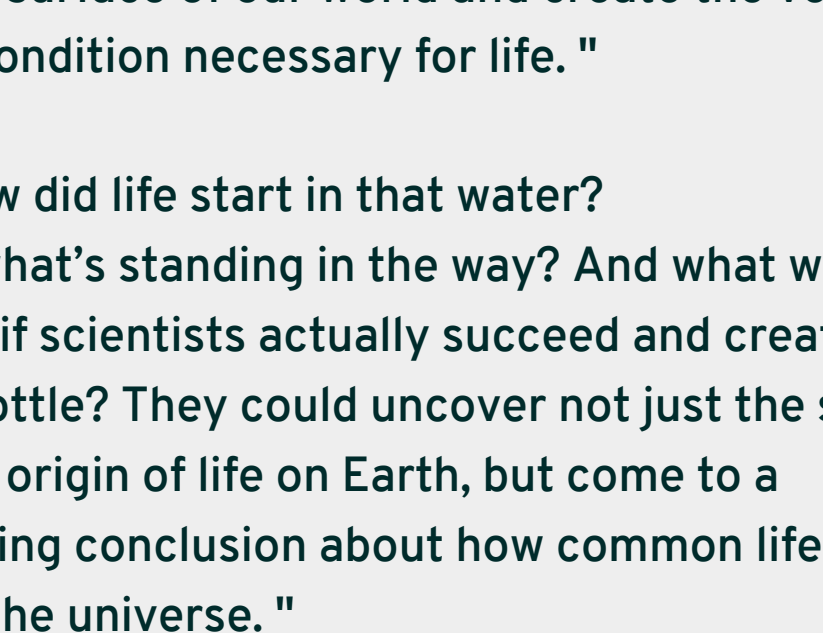

Have a great day,  
find your way

Hi

Often there is little daylight between the hero and the villain. Sometimes the monster is of our own making. Occasionally, the thing we now hate is the thing we once loved – and all that changed was our perspective.

### What is life anyway? 3 unexplainable mysteries of life on Earth

1) Where did Earth's water come from?  
" The quest to understand why there is life on Earth must start with water because water is the one thing on Earth all life needs. Different forms of life can survive on extremely different food sources, but nothing lives without water. "

" So it's curious that scientists don't fully understand how water came to cover two-thirds of the surface of our world and create the very first condition necessary for life. "

2) How did life start in that water?  
" So what's standing in the way? And what would it mean if scientists actually succeed and create life in a bottle? They could uncover not just the story of the origin of life on Earth, but come to a shocking conclusion about how common life must be in the universe. "

3) What is life anyway?  
" On one hand, a definition of life would come in handy as we're searching for signs of it on other planets and moons. How would we know life when we found it? On the other hand, Zimmer explains, perhaps it's just not possible to define life – at least not with our current knowledge. "

### This will soon impact more than just social media On the internet, nobody knows you're a human

" Over the past few years, AI tools and CGI creations have gotten better and better at pretending to be human. "

" Rather than hope for one be-all, end-all online Turing test, Mitchell says this push-and-pull is just going to be a fact of life. False bot accusations against humans will become commonplace – more than just a peculiar online predicament but a real-life problem. "

### We underestimated their survival skills and intelligence In defence of pigeons

" People are enthusiastic about homing pigeons but there isn't much difference between homing pigeons and feral pigeons. It just depends on whether they live in someone's loft as a captive pigeon or the local town square. "

" The homing abilities of pigeons are legendary. We are still learning about how amazing these birds are. They can do basic maths, on a par with monkeys, and can distinguish real words from made up ones. "

" Perhaps the most famous war pigeon is Cher Ami, who in 1918 was awarded the French Croix de guerre medal, for delivering messages from an encircled battalion under heavy fire. Cher Ami was shot through the breast, blinded in one eye, and his right leg was only hanging on by a tendon by the time he delivered his messages. "

### March 2, 1933 King Kong King Kong opened in New York City

#### Wiki Rabbit Hole

King Kong is well known for its groundbreaking use of special effects, such as stop-motion animation, matte painting, rear projection and miniatures, all of which were conceived decades before the digital age.

### Prevail Pieces of Writing Advice from William Faulkner

" A writer needs three things, experience, observation, and imagination—any two of which, at times any one of which—can supply the lack of the others. With me, a story usually begins with a single idea or memory or mental picture. The writing of the story is simply a matter of working up to that moment, to explain why it happened or what it caused to follow. "

### Amazing technology Bionic hand can be updated with new gestures, anytime, anywhere

" Bionic hands convert electrical impulses from the muscles in the upper arm into movement powered by motors in the hand, enabling a user to hold a glass, open a door or pick up an egg. "

" Some rival bionic hands can be app-controlled, but Pollard said the ability to talk to a single device set the Nexus apart. "

### When we were snacks Here is the most terrifying pterosaur ever discovered

" Who hasn't wondered what it would be like to live in the era of the dinosaurs? It certainly would be an amazing sight – but also utterly terrifying, once the reality set in that you were rather close to the bottom of the food chain, a tasty morsel for tyrannosaurs and pterosaurs alike. "

" Pterosaurs should not be mistaken for ancient birds. 'Even though pterosaurs could fly, they were nothing like a bird, or even a bat – Pterosaurs were a successful and diverse group of reptiles – the very first back-boned animals to take a stab at powered flight.' "

"It's not what you look at that matters,  
it's what you see."  
Henry David Thoreau

it's your life  
you understand

Please feel free to forward [Change Happens](#) to anyone you think might enjoy it and have a most excellent day
