Volume 72 from the walls of the digital cave

Change Happens

Have a great day,
find your way

The Alien Life

"I don't feel like we should make friends with him, no."

Hi

When is away the direction to run?

fight or flight
or stay out of sight
does it bite
it's your right
to know
when it might
with no invite
without the light
in the dark of night
grow

into

the rhythm of the run, the beat
and music of the getting away,
the monster found you hiding,
and it's too big to stay and slay

so
into the day
have your say
without delay
it's okay
to go
away

Life outside the city

The best wildlife photos right now

" The World Nature Photography Awards capture the serene and vicious beauty of nature

The natural world is full of wonder. Life thrives in its every corner, from the abyssal depths of the oceans to the loftiest heights above Earth's mountains. Thankfully, nature photographers capture Earth's biodiversity in intimate detail, which is fully on display in the winning images from the World Nature Photography Awards. "

Trying to understand

Why America fell for guns

" Today, Americans live with around 1.2 guns per capita – double that of the next-highest scoring country, Yemen. Despite having less than 5 per cent of the global population, the US possesses0 nearly half of the world's civilian-owned guns. "

Nerd Heaven

Neal.fun

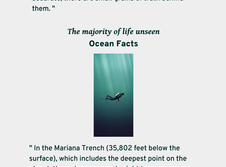
a tiny website by Neal

This might be the best site I have ever seen, (Thank you, my beautiful boy) a nerd using his powers for good. A place full of the joy of knowledge.

April 11, 1976

Apple I

Birth of a brand

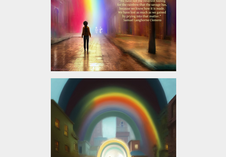


Wiki Rabbit Hole

" The Apple Computer 1 (Apple-1), later known predominantly as the Apple I(written with a Roman numeral), is an 8-bit motherboard-only personal computer designed by Steve Wozniak and released by the Apple Computer Company (now Apple Inc.) in 1976. The company was initially formed to sell the Apple I – its first product – and would later become the world's largest technology company. The idea of starting a company and selling the computer came from Wozniak's friend and Apple co-founder Steve Jobs. One of the main innovations of the Apple I was that it included video display terminal circuitry and a keyboard interface on a single board, allowing it to connect to a low-cost composite video monitor instead of an expensive computer terminal, compared to most existing computers at the time. "

From the greatest revolution

What Are the Origins of Modern Production?



" Prior to the Industrial Revolution, farming was a common profession. But as the Industrial Revolution produced new jobs–first in England and, eventually, around the world–people started leaving their farms for factories. With that transition came more reliable and consistent incomes. And with innovations in mass production, food and household items became cheaper and more readily available as well. "

A little true with the crazy

Why time seems to go by more quickly as we get older

" These conspiracy theories about mind control and CIA agents in the media aren't as far-fetched as they sound. Even if they're not 100 percent accurate, there are small grains of truth behind them. "

The majority of life unseen

Ocean Facts

" In the Mariana Trench (35,802 feet below the surface), which includes the deepest point on the planet, the water pressure is eight tons per square inch. If you made your way down there, it would feel like you were holding up nearly 50 jumbo jets. "

"*We have not the reverent feeling for the rainbow that the savage has, because we know how it is made. We have lost as much as we gained by prying into that matter.*"

Samuel Langhorne Clemens

it's your life
you understand
